

## TYPICAL TYPE - SCISSOR LIFT

### DESCRIPTION

Manufactured by Dexco, these power units are available in AC single-phase and AC three-phase configurations. The units provide electric-powered lifting and use either a solenoid or manual gravity system for lowering.

In the off position, the unit remains securely locked. A pressure-compensated flow control valve maintains a constant lowering speed regardless of the load, ensuring smooth and reliable operation.

### HYDRAULIC CIRCUIT

### APPLICATION: SCISSOR LIFT
